DETERMINATION OF NONSIGNIFICANCE (DNS)

Name of Proposal: DNS 15-026: RUSTLER GULCH FOREST RESTORATION - PHASE 1

Description of Proposal:

The Rustler's Gulch Forest Restoration Project is located on the Rustler's Gulch Unit of the Sherman Creek Wildlife Area. This unit provides important habitat to a variety of animal species including moose. This proposal includes approximately 505 acres of ponderosa pine/mixed conifer uplands in 7 units. Work on the project will occur between July 1, 2015 and June 30, 2016. Current stocking levels throughout the unit far exceed the historic range of variability, putting it at high risk of epidemic insect outbreaks and disease. Furthermore, these conditions have also placed the unit at a higher risk of a stand replacement fire that will also pose a significant threat to the surrounding urban interface.

This proposal will reduce current over-story stocking levels to 12 trees per acre in those units designated for treatment. Leave trees be at least 10" diameter at breast height (dbh), with at least 8 of those in the 14" dbh class or larger. All trees greater than 26" will be left as part of the 8 trees to be left in the 14" and greater diameter class. Selecting dominant and co-dominant tree species with the best growing characteristics will be an important aspect of the leave tree selection process. Gaps and skips between treatment units will create a mosaic of age classes and stocking levels that will benefit many wildlife species. Leave trees will be designated with orange paint by WDFW personnel or their representatives prior to commencement of harvest activities.
